## HOME WHICH HAS MANY ADVANTAGES

Two-Storied Structure Always a Favorite With Builders in Every Locality.

ATTRACTIVE AND "LIVABLE"

Construction Offers Itself Especially to Distinctive Architectural Design, and Interior May Be Laid Out to the Best Possible Advantage.

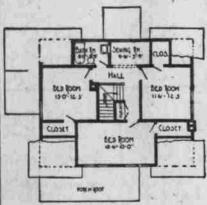

By WILLIAM A. RADFORD. Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to the subject of building, for the readers of this paper. On account of his wide experience as Editor, Author and Manufacturer, he is, without doubt, the highest authority on all these subjects, Address all Inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only enclose two-cent stamp for reply.

The typical construction for houses to our smaller cities throughout the country has been, for some time, a two-storied structure with sleeping rooms on the upper floor. This practice is not without its advantages, seriously to the inherent lack of length panels. orivacy which is associated with homes of only one floor. There is also a feeling of safety from intrusion when a special importance during the winter the house.

shop may all be provided with ample proportions and plenty of light for

nd a hall with attractive staircase eading to the upper floor. A large ased opening on one side of the hall leads into the living room with its two large windows. A similar opening on the other side of the hall leads into the parlor, where the first glance discloses the large fireplace, balanced on each side by a window. This room, lighted by the glow of a good fire in the grate, cannot be other than one of attraction

on cold winter nights. Leading from the living room through double doors is the dining room, with its broad curved bay with the buffet built into the wall beneath the high center window. Entrance may be made to the dining room from

Modern masonry offers the use of a great variety of fancy morning meal in the open air. stone, brick, terra cotta and other natural and manufactured building materinis. By the use of coloring material the stucco house may be made to assume an extremely desirable appearance. Finally, by a combination of several of these, a still more extensive range of exteriors may be produced. It would be a radical taste which could not find satisfaction in one of the possibilities of house-exterior design.

The perspective shown here illustrates a very attractive design of a large family house having for its exterior a combination of stucco and colored shingles, which blend together

First-Floor Plan.

to form an effect which will attract more than passing attention anywhere. The number of possible color combinstions between the shingles and stucco is practically unlimited.

Furthermore the easy slope of the roof, the exposed beams with their when needed, as an ingredient in fancy carving, the lattice work and bread. The author states that only heavy brackets and beams above the upper windows, the massive stucco piltables in abundance secure a sufficient lars on the porch, and the smaller columns in the front windows, all contribute to the general excellence of drates in the form of bread, potatoes this exterior design. The unusual fea- and beer do not. tures give a distinction which cannot be overlooked. The entire structure is an example of the typical house designed with a little more than the typical attention to detail and with a bread making calcium chlorid and a room for the comfort and convenience

of a fairly large-sized family. By the use of a dense mix of concrete in the substructure of the house. flour than to attempt to persuade the many waterproofing materials on the public to adopt whole-grain bread. market, the basement of this house may be made very free from dampness, and with the generous grade windows and a suitable division into now than it was a century or two sections a basement may be formed ago?" which will prove its usefulness in a "I don't know. U. S. WEAK IN SAVINGS

THIS COUNTRY.

Sections Combined.

Deposits of Eastern States Greater Than Those of All Other

> The first savings bank in the United States was established in Philadelphia in 1816. It was patterned after an institution in Scotland, and it was the forebear of the 2,159 savings banks that now dot the country. Of these 2,159 savings banks 630 are mutual institutions and 1.529 have a capital stock. In the New England and the eastern states of New York, New Jersey, Pennsylvania, Delaware and Maryland the mutual savings bank which has no capital stock is the popular form of institution. Outside of the states mentioned there are only

> twenty-three mutual savings banks. These 630 mutual savings banks have 8,305,562 depositors and approximately \$4,000,000,000 on deposit. The 1,529 stock savings banks have 2,380,496 depositors and approximately \$800,000,000 of savings deposits. It will be seen from this state ment that the six New England states and the five eastern states mentioned form the section in which thrift has been carried to a higher degree than in any other part of the country. The total amount of all the savings deposits in banks of the United States is a trifle more than eight and a half billion dollars. This, of course, is an enormous sum, but when it is reduced to a per capita basis it does not indicate the possession of large resources by the individual units of the population. Only 194-10 per cent of the

population of the United States are savers. The average percentage of savings to population of the ten leading European nations is thirty-seven. The records show that in Switzerland 55 per cent of the people have savings accounts, in Denmark 44 per cent, in Norway 41, in Sweden 40, in Belgium 39, in France 34, in the Netherlands 32, in Germany 31 and in 180 million acres of first-class agricul-England 30. A curious contrast is tural land actually available for depresented by the statistics from Japan | velopment-a block three and a half where there are 8,189,000 savings bank depositors, but the per capita Minnesota, and equal to the combined amount of savings is \$3.46, while in land areas of Minnesota, Iowa, Wiscon-Belgium there are only 3,000,000 de | sin, Illinois and Indiana. positors, but the per capita of savings The United States, with the highest

scale of wages, has the lowest percentage of savings, while the countries with the larger proportion of savers all have the lower scales of wages. The comparisons shown by States last year was 17 bushels. This the figures indicate clearly that the people of the United States have a the efficiency which may have been great duty to perform if they are go- reached by individual farmers or my ing to win the goal of commercial pre- individual states. ## WESTERN CANADA AND ALL NATIONS OF EUROPE LEAD THE LAND-HUNGRY

It is Essentially an Agricultural Country.

Western Caunda is the Mecca of the land-hungry man who wishes to earn a good living from the soil and save up money to take care of him in his old age without paying a fancy price for the privilege.

Western Canada is the great wheat producing section of the North American continent, with an average production of more then 30 bushels to the acre as compared with an average of 17 bushels to the acre in the States.

Wheat raising can hardly be made profitable on land that costs from \$50 an acre up unless such land will produce a much higher than a 17 bushel average, or unless the price of the cereal reaches an excessive figure.

The initial investment of \$50 an acre is more than the average man can afford to make if he expects to raise wheat and to make a success of It. A good homestead of 160 acres can still be secured free in Western Can-

secured at so low a cost per acre that it can be made extremely profitable. No other part of the world offers such tremendous opportunities at the present time to the ambitious young farmer as the three great provinces of

ada and additional land admirately

suited to the raising of wheat can be

Western Canada. It is worth the while of the landhungry man to cease his depressing search for local cheap land or for land that is not entirely worked out by long cropping and to look outside his own district. Western Canada is a country that should receive the consideration of all such men. The Western Provinces of Manitoba, Saskatchewan and Alberta are essentially agri-

cultural territory. Out of 478 million acres there are times as large as the total land area of

But whereas the population of the five states mentioned is fifteen million people, the population of Western Canada is only about one and threequarter millions.

It has been said that the average yield per acre of wheat in the United average does not, of course, represent 1915 Western Canadian average-the Told in other terms, the per capita average from nearly twelve million

There are already a large number of American farmers in Western Canada, so that the newcomer could neveroverlooking the fact that the same language is spoken-feel himself in an allen country. There seems, in fact, a tendency to establish little cotonies composed of those coming from the same sections. The characteristics of the country, and the climate and season, are very much the same as in partly by grants from the Canadian Government, from the sales of school lands, of which, when the country was One hundred years of peace has con- first surveyed, two sections in every
